

Agile Methodology — Practice Exercises

CMG-ANG4 — Working as a team · Self-test before the exam

Exercise 1 — True or False

Read each statement and decide if it is true or false.

1. **1.** In Scrum, the Product Owner decides how the team codes each feature. _____
2. **2.** A sprint is usually between one and four weeks long. _____
3. **3.** Kanban uses fixed-length sprints, just like Scrum. _____
4. **4.** The Daily Stand-up is meant to last about 15 minutes. _____
5. **5.** Agile means the team never writes any documentation. _____
6. **6.** The Sprint Retrospective is attended by clients and stakeholders. _____
7. **7.** A WIP limit restricts how many tasks can be "In Progress" at once. _____
8. **8.** In Waterfall, feedback from the client usually comes very early in the project. _____

Exercise 2 — Fill in the blank

Complete each sentence with one of the words in the box.

backlog · velocity · Scrum Master · retrospective · stakeholders · Definition of Done

1. **1.** Before a task can be marked as finished, it must satisfy the _____.
2. **2.** The _____ removes obstacles that are slowing the team down.
3. **3.** All the features the team might build one day are listed in the product _____.
4. **4.** During the sprint _____, the team discusses what could be improved next time.
5. **5.** The team's average _____ helps predict how much work fits in the next sprint.
6. **6.** At the sprint review, the team demonstrates progress to the relevant _____.

Exercise 3 — Grammar practice (modals & future)

Choose the best option to complete each sentence about team roles and upcoming changes.

1. **1.** As Scrum Master, you _____ (must / could) facilitate every daily stand-up.
2. **2.** Starting next month, the whole team _____ (is going to / might) work in two-week sprints.
3. **3.** The Product Owner _____ (should / can't) reorder the backlog whenever priorities change.
4. **4.** If we adopt Kanban instead of Scrum, our board _____ (will / would) show a WIP limit on each column.
5. **5.** Developers _____ (may / must) ask for help during the daily stand-up if they are blocked.

Exercise 4 — Mini case study

"Your support team receives an unpredictable number of small IT tickets every day — no two days are the same, and tickets can be urgent at any moment. There is no single big client waiting for a scheduled demo."

- a) Which framework fits this team best: Scrum, Kanban, or XP? Justify your answer in 2-3 sentences.
- b) Name one Agile vocabulary term that would be especially useful for this team, and explain why.

Exercise 5 — Short answer

1. **1.** In your own words, explain the difference between a Product Backlog and a Sprint Backlog.
2. **2.** Give one advantage and one possible difficulty of adopting Agile in a team used to Waterfall.
3. **3.** Why is a Daily Stand-up kept short (about 15 minutes) instead of being a full meeting?

Answer Key

Check your answers here — try the exercises first!

Exercise 1 — True or False

#	Answer	Why
1	False	The Product Owner decides <i>what</i> is built; the Development Team decides <i>how</i> .
2	True	Sprints are typically 1-4 weeks, often 2 weeks.
3	False	Kanban uses continuous flow, not fixed sprints.
4	True	It's designed to be a fast sync, not a status meeting.
5	False	Agile still uses documentation, just less of it, and it evolves.
6	False	The retrospective is team-only; stakeholders attend the sprint review.
7	True	WIP limits prevent the team from starting too much at once.
8	False	In Waterfall, feedback usually comes at the very end.

Exercise 2 — Fill in the blank

1. Definition of Done
2. Scrum Master
3. backlog
4. retrospective
5. velocity
6. stakeholders

Exercise 3 — Grammar practice

1. must
2. is going to
3. should
4. will
5. may

Exercise 4 — Mini case study (sample answer)

a) Kanban fits best, because the workload is unpredictable and continuous rather than organized into a fixed set of features to demo on a schedule. Fixed sprints would not match the random arrival of tickets.

b) A WIP limit would help, because it stops agents from juggling too many open tickets at once, keeping response times reasonable.

Exercise 5 — Short answer (sample answers)

1. The Product Backlog is the complete, prioritized list of everything that could be built in the product; the Sprint Backlog is only the smaller subset of items selected for the current sprint.
2. Advantage: faster feedback and visibility for stakeholders. Difficulty: the team may resist giving up detailed upfront planning and may need time to adjust to daily check-ins.
3. It is kept short so it stays a quick synchronization tool rather than turning into a problem-solving session, which would waste the whole team's time every day.
