

INTRODUCTION

Purpose of today :

- understand the project
- define agile methodology
- learn some vocabulary
- practise with an activity

THE PROJECT :

Organizing the work of a team

The purpose for you is to create a document that would help your team understand what agile methodology is about and how the work of your team is going to be organized from now on.

For this part, you will have to explain all the different elements in your own words. You will have to describe what Agile Methodology is, what the role of each member of the team is going to be and how a typical project is going to be organized.

To illustrate your ideas, you can add : drawings, charts, diagrams...

PREREQUISITES :

Grammar :

-modals (to describe the role of each person)

https://www.examenglish.com/grammar/b1_modals_recommendations.htm

https://www.examenglish.com/grammar/b1_may_might.htm

https://www.examenglish.com/grammar/b1_modals_recommendations.htm

-future : will and going to (to explain the new elements)

<https://www.perfect-english-grammar.com/will-or-be-going-to.html>

-conditionals (to consider the implementation of new measures and their consequences / effects / results)

https://www.examenglish.com/grammar/mixed_conditionals.htm

Vocabulary :

-agile methodology

<https://www.agilealliance.org/agile101/agile-glossary/>

-IT

A Tale of Two Scrums: Agile Done Right and Agile Gone Wrong

[Jeff Sutherland](#)

Dr. Jeff Sutherland, co-creator of Scrum and Senior Advisor and Agile Coach to OpenView, explains why Healthcare.gov's poor leadership and failure to meet a "working product" resulted in a sinking ship. On the other hand, he also explains how companies can follow in the footsteps of Spotify's success by hiring experienced Agile

coaches, employing seamless coordination, and mastering the art of systematic waste management.

STEP ONE

Observe, comment and define

This is an illustration of Agile compared to the traditional way of working. Describe the different steps and compare the two methodologies.

Not like this....

Like this!

Definition :

'Agile methodology is a list of principles and ideas that help businesses be more flexible and adaptable in the organization of their work. It comprises its own lexicon and routine / schedule to know and respect in order to be more efficient. '

Here are 2 links that can help you with the basics :

-presentation of agile methodology

<https://zenkit.com/en/blog/agile-methodology-an-overview/>

-how to use agile?

<https://www.wikihow.com/Use-Agile-Methodology>

STEP TWO Vocabulary

As this project is about the organization of the work of a team, you might need to use some vocabulary about making decisions

Exercise 1 Complete the sentences with the vocabulary in the box.

opt to	to go for	consideration	favour/favor	against
willing				

- a) I will give a lot of _____ to such a difficult choice.
- b) Generally, I am in _____ of introducing this new law.
- c) Fewer students than ever _____ study maths at a higher level.
- d) I am _____ the idea to throw away all unnecessary clothes.
- e) I felt much better, so I decided _____ a skirt, instead of my everyday jeans.

Answers

- a) I will give a lot of CONSIDERATION to such a difficult choice.
- b) Generally, I am in FAVOUR of introducing this new law.
- c) Fewer students than ever opt TO study maths at a higher level.
- d) I am AGAINST the idea to throw away all unnecessary clothes.
- e) I felt much better, so I decided to go FOR a skirt, instead of my everyday jeans.

Exercise 2 Match each question with the correct answer :

1) How often do you have to think on your feet at work? Do you like it?	a) The market research questions I approved turned out to be inaccurate and we got answers that are totally useless
2) When was the last snap decision you made? What was it about?	b) As little as possible. If I find something rather trivial, I don't waste time on thinking too much about it.
3) Do you think that having a choice is overwhelming ?	c) Actually, I sometimes do. The last time I let fate decide was when I couldn't choose between two desk lamps for my office.
4) What kind of decisions do you outsource at work?	d) It was two weeks ago and I had to quickly decide about a venue for the IT conference we're organizing.
5) Do you ever flip a coin to make a decision? When was the last time you did it?	e) Fortunately, I don't have to do it often because I really hate taking decisions when I don't have much time.
6) Do you have to make a lot of make-or-break decisions at work?	f) Definitely. The more options you have, the more frustrating it becomes to choose only one.
7) How much time do you spend on making minor decisions ?	g) I try to delegate decision-making processes which I know my team will deal with fine without me

8) What decision you've recently made has had an **unexpected outcome**?

h) As a Finance Director I make a lot of such important decisions which can have huge positive or negative effects

www.eslbrains.com

answers : 1/e, 2/d, 3/f, 4/g, 5/c, 6/h, 7/b, 8/a

Exercise 3 Choose one option for each sentence to learn some project management vocabulary.

1) Project managers set for projects to be able to monitor progress and check if the project is delivered on time.

a) obstacles b) milestones c) challenges

2) The most important aspect of a project closure phase is client's acceptance of

a) deliverables b) goals c) products

3) The team must be aware of such as limited resources to be able to take them into consideration during the planning stage.

a) grants b) constraints c) frameworks

4) Clients provide project which represent their needs and help the team define the task they need to complete to ensure the success of a project.

a) program b) demands c) requirements

5) We must define the project to establish the boundaries of the project and responsibilities for each team member.

a) range b) extent c) scope

6) Project managers are responsible for finishing projects on time and delivering results to, either inside or outside the organization.

a) stakeholders b) shareholders c) contractors

Exercise 4 Discuss the following points in pairs. Use the words and phrases from ex. 3

a) Describe the last project you were involved in: think of objectives and issues you had, whether you met the deadline, and how the project was completed.

- b) Think of the biggest challenges there are in managing projects.
- c) What kind of project management methodologies have you heard of?
- d) Have you ever been involved in a project that went wrong?

STEP THREE

ORAL COMPREHENSION

Watch the video which describes how Scrum project methodology works and fill in the gaps in the sentences below:

[What is Scrum?](#)

- A product owner creates a product which is a prioritized wish list.
- During sprint, the team pulls a chunk from the top of that wish list, a sprint backlog, and decides how to implement those pieces.
- The team has a certain amount of time — a (usually two to four weeks) — to complete its work, but it meets each day to assess its progress (daily Scrum).
- Along the way, the Scrum keeps the team focused on its goal.
- At the end of the sprint, the work should be potentially : ready to hand to a customer, put on a store shelf, or show to a stakeholder.
- The sprint ends with a sprint and retrospective.

-As the next sprint begins, the team chooses another of the product backlog and begins working again.

answers :

- A product owner creates a product **backlog** which is a prioritized wish list.
- During sprint **planning**, the team pulls a chunk from the top of that wish list, a sprint backlog, and decides how to implement those pieces.
- The team has a certain amount of time — a **sprint** (usually two to four weeks) — to complete its work, but it meets each day to assess its progress (daily Scrum).
- Along the way, the Scrum **Master** keeps the team focused on its goal.
- At the end of the sprint, the work should be potentially **shippable/deliverable**: ready to hand to a customer, put on a store shelf, or show to a stakeholder.
- The sprint ends with a sprint **review** and retrospective.
- As the next sprint begins, the team chooses another **chunk/part** of the product backlog and begins working again.

STEP FOUR

READING COMPREHENSION

Read the article and find synonyms of the words below:

repeatable =

to question =

delivered =

to demonstrate =

comprehensive =

to harmonize =

objects =

progressive =

Scrum is an iterative and incremental agile software development framework for managing product development. It defines "a flexible, holistic product development strategy where a development team works as a unit to reach a common goal", challenges assumptions of the "traditional, sequential approach" to product development, and enables teams to self-organize by encouraging physical co-location or close online collaboration of all team members, as well as daily face-to-face communication among all team members involved. A key principle of Scrum is the dual recognition that customers will change their minds about what they want or need and that there will be unpredictable challenge.

Scrum calls for four ceremonies that bring structure to each sprint:

- **Sprint planning:** *A team planning meeting that determines what to complete in the coming sprint.*
- **Daily stand-up** (AKA a daily scrum): *a 15-minute mini-meeting for the software team to sync.*
- **Sprint demo:** *A sharing meeting where the team shows what they've shipped in that sprint.*
- **Sprint retrospective:** *A review of what did and didn't go well with actions to make the next sprint better.*

During a sprint, visual artefacts like task boards and burndown charts, visible to the team and spectators alike, are powerful motivators. They drive a spirit of "we're doing this!" Having the opportunity to show off new work at the sprint demo is equally motivating, and the consistent, incremental feedback the team gets from stakeholders at each demo creates a powerful way to develop products.

-adapted from Atlassian.com and Wikipedia

answers

- | | |
|-------------------------------------|---------------------------------------|
| • repeatable = iterative | • delivered = shipped |
| • comprehensive = holistic | • objects = artefacts |
| • to question = to challenge | • to demonstrate = to show off |
| • to harmonize = to sync | • progressive = incremental |
